

SANJAY AAKISH

Specialization in Cybersecurity

+91 9994483930 | [LinkedIn](#) | sanjayaakish8229@gmail.com | [GitHub](#)

CAREER SUMMARY

Demonstrated foundational knowledge in Network Security, Secure System Development, and Threat Analysis. Project experience encompasses the development of cybersecurity solutions, specifically in areas such as Intrusion Detection, and AI-driven security applications. Technical proficiency includes Python, C++, Linux environments, and various networking tools. Problem-solving abilities have been evidenced through participation in internships, hackathons, and diverse technical projects.

EXPERIENCE AND ACHIEVEMENTS

INTERNSHIPS

Python Development Intern – COGNIFYZ TECHNOLOGIES

July 2025 to July 2025

Cyber Security Intern – PRODIGY INFOTECH

June 2025 to June 2025

HACKATHON

Build With India participant

2025

Multiverse National Level Hackathon Winner

2026

OpenEnv Hackathon participant

2026

CYBERSECURITY EVENTS & BUG BOUNTY PROGRAMS

Cybersecurity Summit Bengaluru

2 May-2024

VULNCON

14-15 June 2025

PROJECTS

Network Intrusion Detection and Traffic Behaviour Analysis System

January – April 2026

- Web system identifies cyber-attacks (DoS, Port Scan) by analysing network traffic.
- It employs dynamic, behaviour-based detection, adaptively classifying network anomalies.
- An interactive dashboard visualizes attack distribution, traffic patterns, and threat locations.
- Real-time alerts, custom reports, and user authentication simulate an industry security monitoring system.

AI-Enhanced Defence Mechanisms Against Man in the Middle (MITM) Attacks

November 2023 – April 2026

- Enhances HSTS by integrating AI for behavioural analysis and real-time anomaly detection.
- Enhances defences against Man-in-the-Middle (MITM) attacks by means of proactive and adaptive mitigation.
- Decreases vulnerabilities in secure communications and increases the efficacy of HSTS.

Adversarial Attacks on Explainable AI-Driven Network Intrusion Detection Systems

February – April 2026

- Our intrusion detection system, built with Explainable AI and ensemble models, performed well and offered clear insights into its workings.
- Simulating attacks on network data exposed model weaknesses, significantly impairing its detection accuracy.
- Using SHAP explainability, we identified specific vulnerabilities, highlighting risks in Explainable AI systems.
- We created a machine learning security pipeline for attack simulation, model comparison, and visualization, ready for real cybersecurity use.

TECHNICAL SKILLS

Programming: Python (Intermediate), C++ (Intermediate), SQL, Database Management Systems

Technical Tools & Technologies: Knowledge in Networking tools, and System Configuration

Area of Interest: Networking, Ethical Hacking, Web Development, Software Development

Development Tools: Git, VS Code, Wireshark

Operating Systems: Windows, Linux

SOFT SKILLS

Critical Thinking, Innovation, Leadership, Team Collaboration, Communication

EDUCATION

Jain University, BTech Cybersecurity	2023 – 2027
8.20/10 CGPA	
Bharathi Vidhya Bhavan Senior Secondary (XII)	2023
80.5%	
Shri Vethathiri Vidyalaya Matric School Secondary (X)	2021
Declared 'All Pass' by government Guidelines	

CERTIFICATES

- Cybersecurity Compliance Framework & Regulations — Coursera
- Network Defence Essentials (NDE) — Coursera
- Incident Response, BC & DR Concepts — Coursera
- Incident Response & Risk Management — Coursera
- Ethical Hacking: Reconnaissance & Enumeration — Coursera
- JavaScript Security Foundations — Coursera
- Linux Basics (Command Line Interface) — Coursera
